EDUCATION

Pune Institute of Computer Technology (PICT)

Bachelor of Engineering in Computer Engineering

CGPA: 8.88 / 10

Pune, Maharashtra

2024 – 2028

TECHNICAL SKILLS

• **Languages:** Java, C++, JavaScript, SQL

Backend: Spring Boot, Spring Security, REST APIs, JPA/Hibernate, JWT Authentication

Frontend: React.js, HTML, CSS

Database: MySQL, MongoDB

Tools: Git, GitHub, Maven

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems

PROJECTS

Task Manager API | *Spring Boot, Spring Security, JWT, MySQL, JPA*

- Developed a RESTful task management backend following layered architecture using Spring Boot, Spring Data JPA and MySQL.
- Implemented secure JWT-based authentication and role-based authorization using Spring Security for protected API access.
- Designed CRUD APIs supporting task creation, updation, retrieval and soft deletion with proper validation and centralized exception handling.
- Implemented pagination, filtering and sorting to efficiently retrieve task records.
- Used Hibernate ORM and DTO-based architecture to improve maintainability and separation of concerns.
- Encrypted user passwords using BCrypt and implemented secure login functionality.
- Designed reusable service and repository layers following clean coding practices.

Hostel Automation System

- Developing a backend system for hostel attendance, leave management and laundry workflow automation.
- Designed relational database schema for efficient student and hostel record management.
- Focused on modular backend architecture allowing future integration of authentication and notification modules.

AI Resume Analyzer

- Building an AI-powered application to compare resumes with job descriptions and identify missing skills.
- Generating personalized recommendations using AI APIs to improve resume quality and job matching.
- Designing the application with a modular architecture to support multiple domains and future feature expansion.

ACHIEVEMENTS

- Finalist among **98+ teams** at the MVPM Hackathon, securing a place in the Top 28 teams.
- Participated in the Barclays Hack-O-Hire Hackathon, collaborating on solving real-world engineering problems.
- Actively solving Data Structures and Algorithms problems on LeetCode and Codeforces with Over 100+ questions solved in LeetCode.
- Building scalable backend applications using Spring Boot with a focus on secure REST API development.
